Technical Skills

- **Cloud & DevOps:** AWS (EC2, IAM, VPC), Terraform, GitHub Actions (CI/CD), Docker
- **Observability:** Prometheus, Grafana, PromQL
- **Languages:** Python, Java
- **Core CS:** Data Structures & Algorithms, Operating Systems, Computer Networks
- **Tools:** Git/GitHub, Linux, FastAPI, REST APIs

Problem Solving

Solved 50+ Data Structures & Algorithms problems on LeetCode, covering Arrays, Strings, Hashing, Recursion, and Basic Dynamic Programming

Projects

Automated Cloud Application & Observability Stack

- Designed and built a REST API backend using Python/FastAPI, instrumented with custom Prometheus metrics for real-time observability
- Provisioned and version-controlled AWS infrastructure (EC2) using Terraform for repeatable, automated deployments
- Built a CI/CD pipeline with GitHub Actions to automate build, test, and deployment on every code push
- Containerized the application and monitoring stack with Docker/docker-compose, configuring inter-container networking between Prometheus and Grafana
- Simulated real-world failure scenarios via chaos engineering (stress testing) and validated system resilience using PromQL-based Grafana dashboards

Secure File Transfer

- Built a secure file-sharing web application in Python enabling encrypted upload and download of files between users
- Designed backend logic for file handling, storage, and transfer, with a focus on data security and safe access control

Recon_Scanner

- Developed a Python-based reconnaissance automation tool performing WHOIS lookups, DNS enumeration, Nmap-based port scanning, SSL certificate inspection, and vulnerability scanning. Designed a modular script architecture that auto-generates organized, per-target output reports

Certifications

- AWS Cloud Practitioner Certified (2026-29)
- eJPTv2 Certified (2026-29)
- The Bits and Bytes of Networking — Google (Coursera)
